## XGC11000 18N CR CRANE

## Parts and System Description

### Boom Combinations

crawler crane boom sections are high strength seamless steel as main chords and web tubes, and assistant with high strength strel welded to be equal sections in the middle, and variant section at the both sides to form 4-chord special lattice structure.

#### Standard working condition

HB: standard working condition heavy duty boom, 24~96m, 10.5m boom butt×1, 6m insert section×2, 12m insert section A×1, 12m insert section B×2, 12m insert section B-center hitch×1, 12m thin wall insert section C×1, 12m tipper section ×1, 1.5m boom head ×1.

LB: standard working condition light duty boom, 66~108m, 10.5m boom butt×1, 12m boom insert B×2, 12m insert B-center hitch×1, 12m tipper section×1, 12m tower jib section A×1, 6m tower jib section ×2, 12m tower jib section B×2, 7.5m tower jib top section ×1.

WJ: standard working condition tower jib, when boom length is 30~66m, tower jib 24~84m can be added, 4.5m tower jib butt×1, 6m tower jib insert section×2, 12m tower jib thick wall insert section A×1, 12m tower jib thick wall insert section B×2, 12m tower jib thin wall insert section C×2, 7.5m tower jib top section ×1.

HJ-S3: standard working condition wind power jib, when boom length is 78~102m, wind power jib can be added. 10.5m boom butt×1, 12m transition section I (strengthened) ×1, 12m insert section (strengthened) ×1, 12m transition section II (strengthened) ×1, 3m insert section×1, 6m insert section×1, 12m insert section A×1, 12m boom insert section B×2, 12m boom center hitch section B×1, 12m tipper section ×1, 12m tower jib thick wall insert section A×1, 7.5m tower jib top section×1. Wind power jib is 12m×1.

#### SL working condition

SHB-S7 SL working condition heavy duty boom : optional boom length is 36 ~ 114m , its composition: 10.5m boom butt×1, 12m transition section I (strengthened) ×1, 12m heavy duty section (strengthened) ×1, 12m insert section (strengthened) ×4, 12m transition section II (strengthened) ×1, 6m insert section×1, 12m tipper section ×1, 1.5m boom head ×1.

SLB-S7 SL working condition light duty boom : optional boom length is 114~147m, its composition: 10.5m boom butt×1, 12m transition section I (strengthened) ×1, 12m heavy duty boom (strengthened) ×1, 12m insert section (strengthened) ×4, 12m transition section II (strengthened) ×1, 3m insert section ×1, 6m insert section ×1, 12m insert section A×1, 12m insert section B-center hitch ×1, 12m tipper section ×1, 7.5m tower jib head ×1.

SLB-TS4 SL working condition light duty boom: optional boom length is 126~165m, its composition: 10.5m boom butt ×1, 3m connection section I ×1, 10.5m larger cross section boom I×2, light duty larger cross section boom II ×2, 3m connection section II×1, 12m insert section (strengthened) ×4, 12m transition section II (strengthened) ×1, 3m insert section ×1, 6m insert section ×1, 12m insert section A×1, 12m tipper section ×1, 7.5m tower jib head ×1.

SWJ-S7 SL working condition tower jib: when boom length is 48 ~ 108m , tower jib 24~96m can be added, 4.5m jib butt ×1, 6m tower jib insert section ×2, 12m tower jib thick wall insert section A×1, 12m tower jib insert section B×2, 12m tower jib thin wall insert section C×3, 7.5m tower jib top section ×1.

Gif [ I Zk? `^\_c^\_kj

- SHJ-S7 SL working condition wind power jib: optional boom length is 96~147 m, wind power jib 12m, its composition: 10.5m boom butt×1, 12m transition section I (strengthened)×1, 12m heavy duty section (strengthened) × 1, 12m insert section (strengthened) × 4, 12m transition section II (strengthened) × 1, 3m insert section × 1, 6m insert section × 1, 12m insert section A×1, 12m insert section B-center hitch×1, 12m tipper section × 1, 7.5m tower jib head×1, 12m wind power jib assembly ×1.

- SHJ-S9 SL working condition wind power jib: optional boom length is 96~168m, wind power jib 12m, its composition: 10.5m boom butt × 1, 12m transition section I (strengthened), 12m heavy duty section (strengthened) × 1, 12m insert section (strengthened) × 1, 12m transition section II (strengthened), 3m insert section×1, 6m insert section×1, 12m insert section×1, 12m boom center hitch section B×1, 12m tipper section × 1, 7.5m tower jib top section×1. Wind power jib is 12m×1.

- SHJ-TS4 SL working condition wind power jib: optional boom length is 126~165m, wind power jib 12m, its composition: 10.5m boom butt × 1, 3m connection section I × 1, 10.5m large cross-section boom I × 2, light duty large cross-section boom II × 2, 3m connection section II×1, 12m insert section (strengthened) × 4, 12m transition section II (strengthened) × 1, 3m insert section × 1, 6m insert section × 1, 12m insert section A×1, 12m tipper section × 1, 7.5m tower jib head×1, 12m wind power jib assembly ×1.

## 1) Boom luffing components

- Boom luffing component is composed of two-group pendant, made of high-strength steel and one-time cutting; with high safety factor. Pendants are equipped with balance beam, effectively keep the two groups of pendants in balance state and even force bearing.

## 1 \* D Xj k

- Mast is box-type of twin limb structure, with additional beam between two limbs for good overall stability. Mast is equipped with raising device; SL mast is equipped with automatic backstop system. Standard type mast can be used as temporary boom to realize self-assembly/dismantling of crawler track and boom.

## 1 + KI iekXYd

- Turntable is box type structure made of domestic high-strength steel plate, connected with "工" type and box type beam in the middle of it, and arranged with reinforced plate near the slewing center.

## 1 , Mechanism composition

Refer to the following table for the crane mechanism and its application.

E f %	D \Z_Xe\j d	8ggcZXKfe	Cf ZXKfe
(	Main hoist winch	Boom, jib, tower jib lifting operation	Turntable
)	Auxiliary hoist winch	Boom, jib, tower jib lifting operation	Turntable
*	Single pulley hoisting mechanism	Hoisting of single pulley of boom and tower jib head	Boom butt
+	Main boom luffing mechanism	Boom luffing operation	Turntable
,	Tower jib luffing mechanism	Tower jib luffing	Boom butt
-	SL luffing mechanism	SL boom luffing operation	SL mast butt
.	Slewing mechanism	Superstructure slewing	Turntable
/	Travel mechanism	Overall crane travel	Crawler track
O	Reeving mechanism	Wire rope reeving assistance	Turntable

## 1 - Hoist winch

- Turntable is box type structure made of domestic high-strength steel plate, connected with "工" type and box type beam in the middle of it, and arranged with reinforced plate near the slewing center.

- Main hoist winch rope, rope diam.φ28 mm;

- Main hoist winch rope, rope diam.φ28 mm;

Gif [ I Zk? `^\_c^\_kj

## ■ Boom luffing winch

- Boom luffing winch is a twin drum independent drive unit, with ratchet locking device, built-in speed reducer, and disc type constant closed brake. rope diam. φ 28 mm.

- Super-lift luffing winch has ratchet locking device, built-in speed reducer, and disc type constant closed brake. rope diam. φ 28 mm.

- when the crane is in operation, the operator's cabin can be tilted upward 20° for high level vision.

## ' / Slewing gear

- Slewing gear is arranged at front of turntable and made of two planetary reducers, external engagement with slewing bearing with hydraulic buffering device and sliding function, and controllable constant-closed disc brake for the function of free-swing. Reliable working and easy maintenance.

## ' C Slewing ring

- Slewing ring is 3-row roller type external meshed slewing ring, with high strength, heavy load bearing capacity, and easy for repair and maintenance.

## ( ) Car-body

- Car-body is made of high-strength steel and welded in box type structure, with cross panel installed in the middle to strengthen its stiffness against torsion, simple structure, high loading capacity and good rigidity.

## ( \* Track frame

- Crawler travel unit consists of track frame, track shoe, track roller, drive sprocket, idler roller and travel motor. Track frame is box-type structure, the connection place to frame is partially strengthened, with cross panel installed in the middle of it.

- Two crawler tracks are symmetrically arranged, equipped with track board with width of 1.5m, can be operated synchronously or independently to achieve straight drive and turning around. Crawler travel unit has German imported built-in planetary reducer and driven by variable motor.

## (` Oil cylinder assy

- Slewing ring is 3-row roller type external meshed slewing ring, with high strength, heavy load bearing capacity, and easy for repair and maintenance.

## (+ Hydraulic System

- Combination of closed/open type system with electronic proportional pilot control and variable displacement pump system, good system stability and fine speed regulation.

- Main/auxiliary hoist winch, boom/jib luffing winch, travel unit are of open or close type pump control system with confluence function.

- Slewing gear is closed type pump control system, no need of balance valve and change valve, smooth drive and no impact.

- Variable displacement motor drive is used for main/auxiliary hoist winch and travel unit with large range of speed regulation. Variable displacement motor + variable displacement pump control system can have accurate regulation for movement speed, and with good fine motion.

## (( Operator's cabin

- Operator's cabin is ergonomic design, wide vision, comfortable and convenient operation.

- when the crane is in transport, the operator's cabin can be turned 90° to the front of turntable (boom base removed) so as to reduce transport width;

Gif [ I Zk? `^\_c^\_kj

## (, Electrical System

- Electrical system mainly includes: operation control and safety monitoring for engine, instrument, auxiliary equipment, hydraulic system and load moment limiter.
- Electrical system composition: conventional electric system and PLC monitoring system.
- Conventional electrical system including power supply, start control, engine control and state monitoring, cabin air-conditioner and acoustics, illumination (lamp), rain wiper, and interphone.
- PLC control system includes main/auxiliary winch, slewing gear, boom luffing, left/right crawler travel, cabin rotation/tilting . All movements use electro-hydraulic proportional control technology , and with PLC logic control.

## (- Engine System

- Manufacturer: famous brand, turbocharged, inter-cooled and electronic injection;
- Environmental: comply with Euro III emission regulation;
- Fuel tank capacity: 700L

## (. : fI ekin\`^\_k

- Counterweight includes car-body counterweight, turntable counterweight, SL counterweight.

## (/ Centralized Lubrication System

- The centralized lubrication system is a progressive lubrication system , with computer programming , can automatically point-to-point lubricate grease, ensure each lubrication point with enough grease, and make vehicle maintenance easy and relaxed.

## ((C Hook Block

E Xd \ ; \ X[ weight (t)	. '' K (*%)	, '' K (0%)	) +' K (0%)	( - K (%)
Quantity	(	(	(	(
Pulley g i f l g	) +	(/	-	.

Notes: 700t hook is a combination hook, which can be disassembled into 350t hook.  
 500t hook is a combination hook, which can be disassembled into 250t hook.  
 240t hook is a combination hook, which can be disassembled into 100t hook

## Safety Protection Devices

The safety protection devices comprise: load moment limiter , turntable lock pin , boom backstop , hoist limit switch, anemometer , level gauge , hydraulic system overflow valve , counterbalance valve,two-wayhydrauliclock , slewing warning indicator and travel warning indicator , lightening protection device , over-released protection device , angle indicator, etc.

### switch between installation mode & working mode

- under installation mode, over-released protection device, boom position limiter, and LML are all not working to facilitate installation; under working mode, all the safety devices work.

### Emergency function

- All the movements can be stopped under emergency situation.

### Mis-operation protection

- The lever has mis-operation function, there is safety protection switch at the front side of the lever. When this switch is not pressed down, all movements signals are shielded to prevent from mis-operation.

### Overall-reeved protection

- There is an over-reeved protection device to prevent wire rope from over-reeving. When it reaches to a certain height, the indicator on the screen is light, meanwhile automatically stop hoisting movement.

### Over-released function

- There is a rope end limiter on the hoisting mechanism to avoid over-releasing of rope. When there are only 3 loops left on the drum, the indicating light is on, meanwhile, the lowering movement automatically stops.

### atchet locking device

- It is to lock luffing winch to guarantee the safe stock when boom is not working.

### Jlewing locking function

- There is a slewing locking device for the slewing lock of superstructure.

### Backstop protection

- There are main boom backstop and SL backstop devices to prevent boom and its strut from falling backwards.

### Boom angle limit

- When boom angle reaches the max. limit, boom hoisting stops, it is controlled by load moment limiter and stroke switch; when boom angle is smaller than the prescribed angle, the lowering of boom is stopped, it is controlled by load moment limiter and audio warning is sent out.

- The upper and lower limits of tower jib is controlled by limit switch.

**Safety Protection D\mZ\j****(' ? ook latch protection**

- All the hook blocks are protected with latches to prevent the rope from falling off.

**(( Hydraulic system protection**

- There are hydraulic system balance valve and overflow valve to guarantee working safety and stability.

**(() Coad moment limiter**

- The load moment limiter automatically detects boom angle, lifting load; it sends out warning previously, and stop crane working once there is an overload.

**(\* Audio/Video warning**

- There are triple color warning lamp and audio/video warning, the load and movement state can be indicated to give warning to the driver and personnel outside.

**(+ Illumination lamp**

- There are illumination lamps at front of turntable, and inside operator' s cabin and above the cabin for night operation.

**(, Rearview mirror**

- It is outside the cabin for the driver to observe the rear side of the crane.

**(- Height indicating lamp**

- it is on the boom top for aerial warning.

**(. 8e\df d \k\i**

- Anemometer detects current wind speed and send wind signal to a monitor in operator' s cabin to alert operator for safety.

**(/ Cevel gauge**

- There is an electronic and mechanical level gauge to indicate the slope condition for the reference of the driver.
