# Technical specifications

Superstructure	
<b>Frame</b>	Designed and manufactured by XCMG, made of high strength steel.
<b>Hydraulic system</b>	Electric proportional closed pump is used for lifting and slewing; electric proportional open pump is used for luffing and telescoping. Through logic control of plug-in valve spool, main valve is used to control telescoping and elevating operation; large power air-cooled hydraulic oil radiator can effectively reduce the oil temperature.
<b>Control system</b>	The pilot electric and hydraulic proportional control, stepless speed regulation, all movements of the crane is controlled by two levers at left and right sides and virtual keys on the display screen.
<b>Main winch</b>	Driven by a hydraulic motor, with build-in planetary gear reducer. Specific anti-disorder rope winding drum and anti-coiling wire rope are available.
<b>Engine</b>	In-line, 6 cylinders, water cooled, electric injection diesel engine, compliant with off-road Stage IV emission standard WP7G300E472, made by Weichai. Rated power: 220kw/2200rpm Max. torque: 1200 Nm / (1400 ~ 1600) rpm (Weichai) Fuel tank capacity: 380 L. The hydraulic pump disconnect is adopted to improve the cold starting performance.
<b>Slewing system</b>	Three-point roller external tooth slewing ring with a dual slewing mechanism is driven by hydraulic motor, with built-in planetary gear reducer and constant-closed brake equipped, and may continuously slew 360° . Power control and free slewing function as well as stepless speed regulation are available.
<b>Safety device</b>	Hydraulic counterbalance valve, hydraulic relief valve, hydraulic double-way valve, LMI are available. Lowering limiter is equipped in winch to prevent rope over-releasing. Anti-two block is fitted on the boom head to prevent rope over-winding. Anemometer is equipped to check whether aerial wind velocity is in safe working range.
<b>Operator's cab</b>	Designed according to ergonomics, the cab is safe and comfortable. Safety glass is used, and protective grilles are installed above the roof. Sun shields are equipped for windshield and roof window. A sliding door and a front step with protective handrails are available to make it easy and safe to access and exit the cab. The cab is connected with the turntable through a swing arm which enables the cab to tilt forwards/backwards, also making it easy and safe to access and exit the cab. The cab is also able to turn backwards around the rear pivot to enlarge the operator's field of view.
<b>Electrical system</b>	DC 24 V, with 2 sets of 12 V batteries in series.  When the actual load moment is approaching the overloading value, audible and visual warning will be sent out, and the dangerous operation will be automatically cut off before overloading occurs. Overload memory function (black box) and fault self-diagnosis function are available.
<b>Counterweight</b>	160 t in total: 20 t base + slabs (10 t × 2, 10 t × 10 and 5 t × 4) . The counterweight can be movable forward or backward or be in neutral.
<b>Hook block</b>	130 t hook block. Double-hook, deadweight of 2900kg, Parts of line: 9

	Boom length		Driving speed
	Radius		Grade ability
	Boom angle		Tires
	Boom hoisting height		Outriggers
	Fixed jib length		Hook block

	Independent jib head / Wind power jib		360° operation of the boom
	Luffing jib		Super lifting device

## Notes

1. The manual is intended as reference only. See Operation Manual and Rated Lifting Capacity Manual for correct operation instructions.
2. The total rated loads given in the rated load charts are the maximum lifting capacity (in t) under corresponding boom length and radius when the crane is set up on firm and level ground, which includes the weight of the hook block and slings. The weight of above-mentioned devices should be deducted from the rated lifting load.
3. The working radius shown in the rated load charts is the horizontal distance between the load and slewing axis of crane when the load is lifted off the ground.
4. Observe the boom angle limit. Never operate the crane with the boom angle beyond the recommended limit even if a load is not being carried.
5. A lifting operation is permissible only when the wind force is below grade 5 (instantaneous wind speed is 14.1 m/s, wind pressure is 125 N/m<sup>2</sup>).
